

Exercise 11: Implementing Dependency Injection

CODE:

```
// Repository Interface

interface CustomerRepository {

    String findCustomerById(int id);

}

// Concrete Repository

class CustomerRepositoryImpl implements CustomerRepository {

    public String findCustomerById(int id) {

        if (id == 101) {

            return "Rahul";

        } else if (id == 102) {

            return "Sneha";

        } else {

            return "Customer Not Found";

        }

    }

}

// Service Class

class CustomerService {

    private CustomerRepository repository;

    CustomerService(CustomerRepository repository) {

        this.repository = repository;

    }

    public void getCustomerDetails(int id) {

        String customer = repository.findCustomerById(id);

        System.out.println("Customer ID : " + id);

        System.out.println("Customer Name : " + customer);

    }

}
```

```
}  
  
// Main Class  
  
public class Main {  
    public static void main(String[] args) {  
        CustomerRepository repository = new CustomerRepositoryImpl();  
        CustomerService service = new CustomerService(repository);  
        service.getCustomerDetails(101);  
    }  
}
```

OUTPUT:

```
Customer ID    : 102  
Customer Name  : Sneha
```
